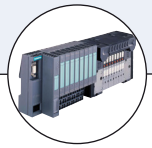
Type 8041 can be combined with…

Type 8025
Insertion flowmeter or batch controller (remote version)

Type 8802
ELEMENT continuous control valve systems

Type 8619
multiCELL - Transmitter/controller



Type 8644
Remote process actuation control system AirLINE

PLC

The electromagnetic flowmeter 8041 is made up of an electronic module and a sensor consisting of PVDF or stainless steel material. It has been designed to measure a flow rate of neutral and slightly aggressive fluids with a conductivity of more than 20 µS/cm in DN06…DN400 pipes.

It is fitted with a 4…20 mA output, a pulse output and a relay output. The different parameters can be set by means of 5 DIP switches, a push-button and a 10- field LED bargraph. It is available:
- with G 2" connection for the version with a PVDF sensor
- with G 2" or clamp connection for the version with a stainless steel sensor.

The version with a stainless steel sensor can be used in applications with higher pressures (PN16) and higher temperatures (150 °C).

Main features and programming

Using as a flowmeter

- Programming of the full scale
  - selection of a predefined measuring range: 0…2, 0…5 or 0…10 m/s
  - selection by Teach-In: with the actual max. flow velocity of the application
- 4…20 mA current output
- 0…240 Hz frequency output
- Relay output: switching mode either window or hysteresis, on low or high switching threshold
- Relay Time delay before switching
- Filter
- Alarm:
  - for full scale exceeding with 22 mA and 256 Hz
  - for fault signalling with 22 mA and 0 Hz

Using as an ON/OFF control

- Flow detection with switching thresholds, defined as a percentage of max. flow rate.

- Adjustment of the full scale of the device accordingly to the customer process full scale.

Possible applications

- Flow control of conductive fluids, contaminated or not:
- Waste water treatment
- Flow control of drinking water
- Laundries: measurement and control of the water consumption
- Swimming pools: pump protection and flow control
- Food-processing industry: monitoring of the cleaning cycles (conform to FDA)
- Irrigation

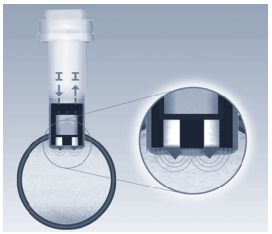
Design



The E-shaped magnetic system inside the sensor induces a magnetic field into the fluid, which is perpendicular to the direction of flow. Two electrodes are in galvanic contact with the liquid.

Based on the Faraday law a voltage can be measured between these electrodes once a liquid (min. conductivity of 20 µS/cm) flows along the pipe. This voltage is proportional to the flow velocity.
Using the K-factor for the individual pipe diameter the speed of flow is converted into volume per time.

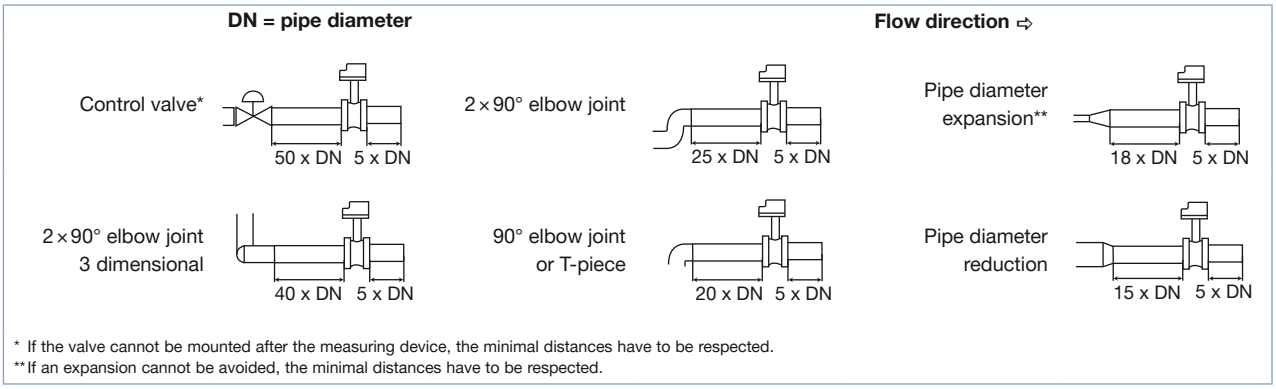
Installation

The 8041 flowmeter can easily be installed into any Bürkert Insertion fitting system (S020) by just fixing the main nut.

Minimum straight upstream and downstream distances must be observed. According to the pipe's design, necessary distances can be bigger or use a flow conditioner to obtain the best accuracy.
Fore more information, please refer to EN ISO 5167-1.

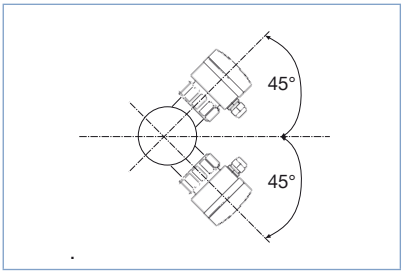
EN ISO 5167-1 prescribes the straight inlet and outlet distances that must be complied with when installing fittings in pipe lines in order to achieve calm flow conditions. The most important layouts that could lead to turbulence in the flow are shown below, together with the associated prescribed minimum inlet and outlet distances.

These ensure calm, problem-free measurement conditions at the measurement point.

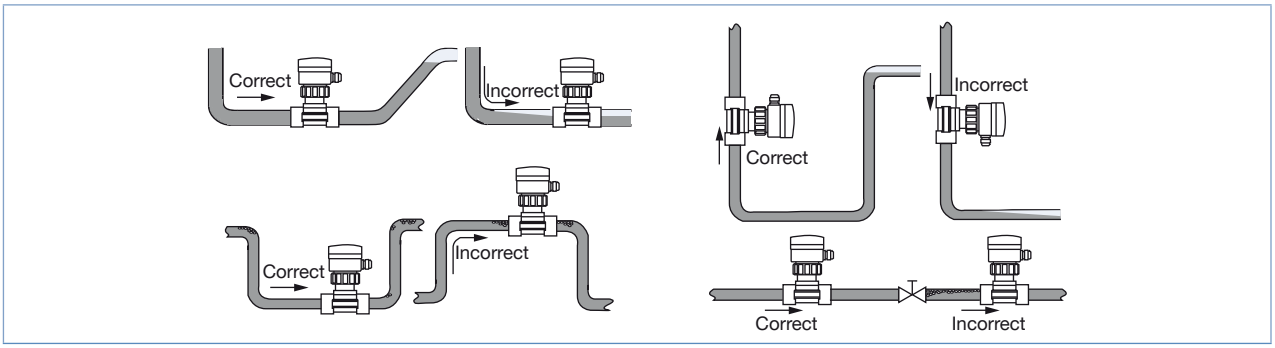


* If the valve cannot be mounted after the measuring device, the minimal distances have to be respected.
** If an expansion cannot be avoided, the minimal distances have to be respected.

It is advisable to mount the flowmeter at a 45° angle to the horizontal centre of the pipe to avoid having deposits on the electrodes and false measurements due to air bubbles



The device can be installed into either horizontal or vertical pipes.
Mount the 8041 in the following correct ways to obtain an accurate flow measurement.



Pressure and temperature ratings must be in accordance to the selected fitting material. The suitable pipe size is selected using the diagram Flow rate/Velocity/DN.

The flowmeter is not designed for gas or steam flow measurement.
